FAQ

WHAT IS IT?

Laser-Like Lipo is a pain free, non-invasive device used for reducing fat by emitting light (Laser) over the skin. Best suited for those only about 25 pounds over ideal weight, and more concerned with "problem areas" than total-body weight loss, in good health with good skin elasticity.

HOW DOES IT WORK?

A technician places pads equipped with laser diodes directly onto the skin. The laser energy penetrates down to the fat cells and creates tiny holes in their membranes. This causes the fat cells to release their stored fatty acids, glycerol, and water into the body and then shrink, potentially resulting in lost inches. The body then flushes out the expelled fat-cell contents via the lymphatic system or burns them for energy.

IS THERE DOWN TIME?

No. Laser-Like Lipo is a non-invasive procedure with no downtime or side effects.

WHEN WILL I SEE RESULTS?

Results are instant and permanent when a healthy diet and lifestyle is maintained. Laser-Like Lipo does not destroy fat cells, rather, empties them of their contents, so the fat cells are capable of storing fat again. A balanced diet is the only way to ensure lasting results.
